

Umair Amjad

Flutter Mobile Developer | iOS & Android | Firebase | Cross-Platform

Lahore, Pakistan | +92 311 6834234 | codewithumairoffical@gmail.com | linkedin.com/in/umair-amjad-b3397a254 | github.com/Umair-Amjad-Ali | www.umairamjad.site

PROFESSIONAL SUMMARY

Flutter mobile developer with 3+ years of experience building and shipping production iOS and Android applications. Skilled in state management, Firebase integration, native device features, and REST API consumption. Comfortable owning features end-to-end from UI design handoff through to App Store deployment.

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, Cross-Platform Development, State Management, Payments Gateway

Firebase & Backend: Firestore, Realtime Database, Firebase Auth, Cloud Storage, Supabase

Native Integrations: Camera, QR/Barcode, GPS, Video Player, Push Notifications, Local Storage, Hive, Shared Preference, SQLite

APIs & Integration: RESTful APIs, LLM API, Google Maps API, Third-Party SDKs, JSON Parsing

Architecture & Patterns:GetX,RiverPod, Provider, Clean Architecture, MVC, MVVM

Tools & Practices: Git, GitHub, Figma, Xcode, Android Studio, VS Code, Agile/Scrum, CI/CD (Github Actions)

Deployment: Apple App Store, Google Play Console, Firebase Hosting, Vercel, Netlify

Other: Web Development, JavaScript, React JS, Next JS, Tailwind CSS

WORK EXPERIENCE

SyntciAI — Flutter Mobile Developer

Aug 2024 – June 2026

- Built responsive Flutter UIs from Figma designs for iOS and Android, cutting design-to-delivery time by ~30% using shared component libraries.
- Integrated REST APIs covering data sync, media delivery, and push notifications with optimized async handling for consistent performance.
- Developed custom animations and native integrations (camera, GPS, QR scanner) using GetX, reducing UI jank on mid-range devices.
- Participated in Agile sprints and peer code reviews alongside designers and backend engineers, improving overall release quality.

Enigmatix — Web Developer

Mar 2023 – Feb 2024

- Built and maintained responsive web applications using React.js and Next.js from Figma designs, delivering pixel-perfect UIs on schedule.
- Developed reusable component libraries with Tailwind CSS, cutting average feature build time by ~25% across multiple client projects.
- Integrated RESTful APIs and third-party SDKs for authentication, dynamic content, and real-time features with structured error handling.
- Ensured cross-browser and cross-device responsiveness; contributed to mobile UI reviews using Flutter perspective to keep experiences consistent.

PROJECTS

Borkow — Premium Social Discovery & Community App

Dec 2025 – Present

Stack: Flutter · Supabase · Dart · Stripe API · Riverpod

Live: [App Store](#) · [Play Store](#)

- Built a real-time, Tinder-style swipe deck with WebSocket messaging, read receipts, and typing indicators.
- Wrote custom PostgreSQL RPC functions for concurrency-safe, instant mutual matching outside default RLS policies.
- Built Supabase Edge Functions (TypeScript) to validate billing receipts across Google Play, App Store, and Stripe before tier upgrades.

Battery Eye — Field Operations & Inventory Platform

Stack: Flutter · Dart · GetX · Firebase Auth · Firestore · QR Scanner · PDF Generation

Live: [App Store](#) · [Play Store](#)

- Role-based auth with shift passcode routing, real-time admin session control, and truck asset locking per shift.
- Full ops dashboard (6 modules) with automated PDF reports, replacing a 1-2 hour manual daily process.
- QR/barcode scanner integration for fast asset lookup and inventory updates directly from the field.

Nutrea — AI-Powered Nutrition & Fitness Tracker

Stack: Flutter · Firebase · GPT API · GetX · Custom Charts

Live: [App Store](#)

- GPT API meal photo analysis — auto-calculates calories, protein, carbs, and fat from a single image.
- Animated dashboards for calories, hydration, and weight trends with 7/30-day views and milestone notifications.
- Goal-setting system with push notifications and streak tracking to drive daily engagement.

ShareMate — Group Expense Splitter & Settlement Engine

Stack: Flutter · Dart · Supabase · Riverpod · Hive

Live: [App Store](#)

- Real-time group expense splitting with equal and custom allocations, Firestore balance networks, and debt minimization logic.
- Live social directory, friend request system, partner tracker with lifetime metrics, and fl_chart financial visualizations.
- 10-step interactive onboarding, atomic Firestore batch writes, and dynamic base currency synchronization.

TheNotYou — Cognitive Therapy & Resilience Companion

Stack: Flutter · Dart · Laravel API · MySQL · Local Notification

- 9 therapeutic chambers (Addiction Breaker, Guilt Cleanser, Anger Tamer) in a futuristic neon UI with 60fps custom canvas rendering.
- Integrated a Laravel REST API for session telemetry logging and MySQL-backed emotional data persistence.
- Local state machine caches multi-step therapy progress on device, syncing to the backend on session completion.

ModivFit — Fitness Social Platform

Stack: Flutter · Custom APIs · GetX · Native Video Player · Media Picker

- Social fitness app with post sharing, likes, comments, native video playback, and consistent 60fps custom UI components.
- Device gallery integration with media picker for uploading and sharing workout content.
- Custom workout tracking and progress logging UI with smooth transitions across all screen sizes.
